Education

LinkedIn: <https://www.linkedin.com/in/eric-li-el/>

Cornell University, College of Computing and Information Sciences, Ithaca, New York

Graduating May 2025

- **Degree:** Masters of Engineering in Computer Science (**GPA: 3.92**)
- **Awards:** Cornell Big Red Hacks Hackathon Overall **3rd Place**

University of Virginia (UVA), School of Engineering, Charlottesville, Virginia

Aug 2021 – May 2024

- **Degree:** Bachelor of Science in Computer Science and Minor in Applied Math (**GPA: 3.91**)
- **Clubs and Leadership:** Student Game Developers (**Treasurer**), Project Code (**Founder**)

Relevant Skills

- **Computer Languages:** Java, Python, C/C++, C#, SQL, MySQL, NoSQL, R, JavaScript, HTML, CSS, and PHP
- **Platforms and Frameworks:** Angular, .NET, React, Microsoft Azure, Google Cloud, MongoDB, Django, and Flask
- **Tools and Libraries:** Git, Docker, Microsoft SQL Server, Llama 3, PyTorch, scikit-learn, OpenAI Gym, and NumPy
- **Business and Project Management:** Microsoft Office, Power Apps, Power BI, and Smartsheet
- **Skills:** Agile, Scrum, RESTful APIs, Database Systems, Testing, DevOps, AI/ML Models and Pipelines, LLM's

Work Experience

Logistics Information Technology (LIT)

Jun 2024 – Present

Full Stack and Machine Learning Developer

- Oversaw an end-to-end AI model pipeline system on Microsoft Azure, successfully integrating 8 production models with update mechanisms, API endpoints, and strategic caching solutions, streamlining the company's AI operations.
- Designed an intuitive AI visualization dashboard using Angular and KendoUI to display results from the production models, including an interface allowing users to query the company's RAG system with natural language questions. Converted model outputs into interactive graphs and dynamic lists, simplifying AI interaction for non-technical users.
- Expanded company API through C# and .NET to connect new stored procedures with the front end. Implemented a database terminology translation feature by cross-referencing tables with a dictionary table.
- Created an unsupervised machine learning model that matches over 20 million machinery parts to their most similar counterparts using their description, technical characteristics, and material. Increased part search efficiency by 60%.

Federal Aviation Administration

Jun – Aug 2023

MSI Gateway Intern (FV-399-C)

- Led the design and transition to a new project management system that suited the diverse experience levels across a team of 50. Leveraged strong communication skills to recommend new software and tools needed.
- Programmed a project ticketing software that directed project requests, tracked approval statuses, and created workspaces within Microsoft SharePoint. Implemented a clean, engaging UI design for the software.

George Mason University (GMU) and Air Force

Jun – Dec 2022

Software Development Intern

- Developed a Java simulation system capable of rendering complex satellite trajectory simulations for 20-100 concurrent objects on an interactive 3D globe, integrating outputs from explainable AI models.
- Added interpretability modules, translating complex AI predictions into visual and text explanations for stakeholders.
- Engineered scalable data and AI output pipelines, maintaining performance across variable simulation scenarios.

Projects

Heritage Project

Apr – Aug 2024

- Produced a family tree website that would connect family member information through interactive graphs.
- Coded a Flask API with 10 SQL tables on Google Cloud, enhancing database security with triggers and user-roles.

Lost and Found Website

Aug – Dec 2023

- Co-developed a lost and found website through Django using Google Maps API and Google authentication.
- Implemented 60 unit tests and outlined comprehensive testing strategies, including coordinating beta testing with 25 users to identify UX improvements and fix critical functionality issues.
